Task: Troubleshooting a Wi-Fi Connection Issue**Instructions:** How to Fix a Wi-Fi Connection Problem

If your device is connected to Wi-Fi but not accessing the internet, follow the steps below.

Step 1: Check Wi-Fi Connection

- Make sure Wi-Fi is turned on
- Confirm you are connected to the correct network

Note: If you are not connected, select your network and enter the password.

Step 2: Restart Your Device

- Turn off your computer or phone
 - Wait 30 seconds
 - Turn it back on
-

Step 3: Restart Your Modem and Router

- Unplug the router from power
 - Wait 30 seconds
 - Plug it back in
-

Step 4: Check Other Devices

- Try connecting another device to the same Wi-Fi

Note: If other devices also fail, the issue is likely with the network, not your device.

Step 5: Forget and Reconnect to Network

- Go to Wi-Fi settings
 - Select your network
 - Click “Forget”
 - Reconnect using the password
-

Step 6: Run Network Troubleshooter (Windows Computers)

- Go to Settings → Network & Internet → Status
 - Click Network Troubleshooter
 - Follow the prompts
-

Step 7: Contact ISP

- If the problem continues, please contact your internet service provider

After having my significant other follow my instructions, I realized that some of my steps were too vague and needed more detail. For example, I originally said to restart the modem and router in step 3, but I did not include how long to wait or how long it takes to fully restart. She also mentioned that it was unclear what she should do if other devices did in fact connect to the network, as mentioned in the notes section of step 4. These changes made the instructions easier to follow and reduced confusion. Testing the instructions helped me see how someone else interprets my writing, which is important in technical writing. I learned that being specific, clear, and detailed is necessary to prevent misunderstandings. Overall, this process showed me how important it is to think from the user’s perspective when writing instructions. I will be reposting

the instructions with the revised parts added to it.

Task: Troubleshooting a Wi-Fi Connection Issue (Revised)

Instructions: How to Fix a Wi-Fi Connection Problem

If your device is connected to Wi-Fi but not accessing the internet, follow the steps below.

Step 1: Check Wi-Fi Connection

- Make sure Wi-Fi is turned on
- Confirm you are connected to the correct network

Note: If you are not connected, select your network and enter the password.

Step 2: Restart Your Device

- Turn off your computer or phone
 - Wait 30 seconds
 - Turn it back on
-

Step 3: Restart Your Modem and Router

- Unplug the router from power
 - Wait 30 seconds
 - Plug it back in
 - Wait 2-3 minutes for a full reboot
-

Step 4: Check Other Devices

- Try connecting another device to the same Wi-Fi

Note: If other devices also fail, the issue is likely with the network, not your device. If only one device is not working, the issue is likely with that device rather than the network.

Step 5: Forget and Reconnect to Network

- Go to Wi-Fi settings
 - Select your network
 - Click “Forget”
 - Reconnect using the password
-

Step 6: Run Network Troubleshooter (Windows Computers)

- Go to Settings → Network & Internet → Status
 - Click Network Troubleshooter
 - Follow the prompts
-

Step 7: Contact ISP

- If the problem continues, please contact your internet service provider
